CENTRAL BANK OF THE BAHAMAS

Your New $10 Banknote

Front of note

A new $10 banknote has been introduced and it is important that you know what to look for to verify whether a note is genuine or not.

If you are still in doubt, compare the suspect note to one that you know is real. For further information, see www.centralbankbahamas.com/banknotes

Feel

1. Run your fingers across the Bank title, large $10 values, island elements and side bars to feel the characteristic raised print.

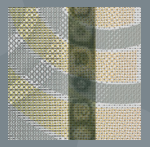

2. The updated note features a warmer grey palette with tropical yellow and orange undertones, replacing the primarily blue, multicoloured tonality of the circulation note.

Look

When you hold the note up to the light you will see:

3. The watermark of Sir Stafford Sands - the same subject as the printed portrait on the front of the note - along with a lighter area reading '$10'. You can see this from both sides of the note.

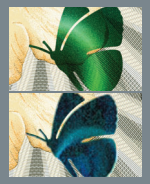

4. That the security thread appears as a solid line rather than just appearing on the surface of the note in patches.

5. On the back, the lighthouse and flamingos have a more orange tone, replacing the pink-ish-red tone of the circulation note.

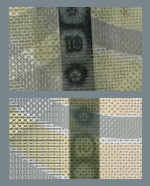

Tilt

6. On the front of the banknote there is a butterfly that changes from metallic green to blue as you tilt the note.

7. There is a subtle, lustrous golden band across the back of the note. In this band you can see repeating images of the letters CBB, $10 and Blue Marlin.

8. On the back of the banknote, a portion of the security thread can be seen appearing on the surface of the note showing shifting images of a sand dollar and the number 10. The colours of these images in the thread switch from light on dark to dark on light as you move the note around.

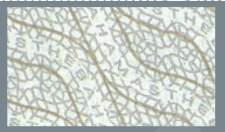

Check

9. Under UV light, the Coat of Arms and small "$10" appear beneath the horizontal serial number. On the back, the see-through feature and flamingos fluoresce, while scattered fibres appear throughout the note.

10. Use a magnifying lens to reveal microprinted text, including "CBB," "10 Dollars" and "Central Bank of The Bahamas."

11. The updated note features wave-pattern linework with integrated text along the front edges, replacing the square-dot pattern of the circulation note.

12. The updated note features more defined island linework, with island names appearing in different locations.

13. The Coat of Arms on the back is more defined, with increased shading and detail.

14. The printing company name on the back of the note has been updated.
